AI Week B Group 5 Zoom Meeting

Detailed Meeting Notes: Alexander Price's Zoom Meeting

Meeting Context & Participants

This meeting took place between three students - Alexander Price, Brittanyfetterman, and Aidan Kleinman - to discuss their final group project deliverables. The meeting occurred near the end of the semester, with graduation approaching on May 8th and a final exam scheduled for May 5th.

Personal Updates & Challenges

Health & Workload Issues

- Brittanyfetterman expressed feeling exhausted and completely maxed out with workload, including readings, studying for tests, and multiple group projects
- Alexander reported being sick for two days, losing 10 pounds, experiencing severe dehydration, and nearly requiring hospitalization
- Alexander was simultaneously working on another project involving coding and paper writing, plus preparing a topics presentation with Brittany for the next day

Project Status & Team Dynamics

Module 6 Completion

The team received a score of 100 on Module 6, which they were pleased about.

Individual Submission Requirements

Components Required

1. Personal reflection
2. Contribution documentation
3. System-specific findings
4. Minimum length of at least one page

Brittanyfetterman's Approach

Brittanyfetterman had already completed and uploaded her individual paper, which included:

- All elements requested for the group paper (ethical analysis, legal considerations, etc.)
- Specific focus on her assigned system (ChatGPT)
- Structured so content could be extracted for the group paper
- Completed a couple days prior but couldn't upload until getting home due to work computer restrictions

Aidan's Status

Aidan had started his individual work but needed clarification on requirements, which were explained during the meeting.

Group Deliverable Requirements

Required Components

Component	**Description**
Synthesis Quality	Compilation and integration of all findings across different AI systems
Ethical Analysis	Examination of ethical considerations and implications
Legal Considerations	Discussion of legal aspects and compliance issues
Report Clarity	Clear, well-organized presentation of information
Repository Organization	Proper structure and documentation in code repository
Documentation Questions	Identification and documentation of key questions

Content Structure

The group paper should include:

- Compilation of findings across all team members' AI systems
- Comparison of mitigation strategies
- Identification of unique challenges and risks
- Similar format to their previous group paper

Contribution Matrix

A matrix documenting "who did what" needs to be created, similar to their previous project submission.

Work Process & Timeline

Agreed Workflow

1. Brittanyfetterman will create the initial group document structure
2. Team members can assign themselves to specific sections/tasks
3. Deadline for self-assignment: 8PM the following day (tomorrow)
4. If tasks remain unassigned by 8PM, Brittanyfetterman will assign remaining work
5. All individual submissions should be completed by tomorrow to facilitate group work

Content Extraction Strategy

Brittanyfetterman clarified her approach to writing the group paper:

- She will extract relevant information from individual papers if they contain the required elements
- She will **not** review AI conversation transcripts to extract information
- Team members are responsible for including their own information in their individual papers
- If someone chooses a different approach for personal reflection, they'll need to contribute more directly to the group paper

Remaining Semester Work

Outstanding Tasks

- Complete individual submissions
- Complete reading quiz
- Take final exam (Unit 7 on AI)
- Complete group paper and deliverables

Exam Details

- Originally thought to be due Tuesday of the following week
- Actually due May 5th (Tuesday)
- Professor extended the time window slightly
- Covers Unit 7 on AI topics

Meeting Tone & Dynamics

The meeting was relatively brief and efficient, with participants acknowledging this as their last group meeting. There was a mix of frustration about workload and team dynamics, relief that the semester was ending, and anticipation about graduation. The conversation was casual and collegial among the three active participants, with clear communication about expectations and responsibilities.

Quick recap

The meeting focused on discussing the final project deliverables for a group assignment, with students Alexander, Brittanyfetterman, and Aidan reviewing requirements and next steps. The group discussed individual submission requirements, including personal reflections and documentation of contributions, with Brittanyfetterman noting she had already completed her individual paper incorporating required elements. They reviewed the structure needed for the final group paper, which should include synthesis quality, ethical analysis, legal considerations, report clarity, repository organization, and documentation of individual contributions. The students agreed to create a shared document where each member could assign themselves tasks, with Brittanyfetterman offering to assign remaining tasks by 8PM if needed. The conversation also touched on upcoming graduation ceremonies and the final exam scheduled for May 5th.

Next steps

- Alexander: Complete individual submission (personal reflection, contribution documentation, and system-specific findings) by tomorrow
- brittanyfetterman: Start the group document and allow team members to assign themselves tasks
- All team members: Assign themselves sections in the group document by 8PM tomorrow, otherwise brittanyfetterman will assign remaining tasks
- Alexander: Create and share the final report structure/document for group contributions

- All team members: Contribute to the group paper synthesis, including quality, ethical analysis, legal considerations, report clarity, repository organization, and documentation questions by end of week
- All team members: Create a matrix showing who did what for the final group deliverable

Summary

Project Progress and Team Concerns

Alexander and Brittany discussed their progress on a project, with both expressing frustration about another team member's lack of contribution despite potentially receiving a good grade. They mentioned completing work on Module 6, which scored 100, and discussed concerns about one team member's minimal participation in the project.

Student Workload and Health Concerns

Brittany expressed feeling overwhelmed with her workload, including readings and studying for tests. Alexander shared that he had been sick for two days, losing weight and experiencing severe symptoms including dehydration. The conversation briefly touched on news about fires in Tuscaloosa causing road closures.

Academic Deadlines and Project Planning

The group discussed upcoming academic deadlines, confirming that a test is due on Tuesday of the following week. Alexander mentioned he needs to complete his individual work and prepare for a topics presentation with Brittany for the next day. The group also discussed their final project requirements, which include compiling findings, comparing mitigation strategies, identifying unique challenges and risks, and creating a matrix to document individual contributions to the work.

Project Submission Requirements Discussion

The team discussed requirements for individual submissions and a group deliverable. Brittany explained she had already uploaded her individual paper which incorporated the required elements including ethical analysis, legal considerations, and documentation. Alexander clarified that individual submissions should include personal reflection, contribution documentation, and system-specific findings, with a minimum length of one page. Aidan confirmed he had started his individual work but needed clarification on the requirements.

Group Paper Task Assignment Meeting

The team discussed responsibilities for writing a group paper, with Brittany emphasizing that individual members should be responsible for including their own information rather than

having her extract it from their conversations. Alexander agreed to create and distribute a document where everyone could assign themselves tasks, with Brittany offering to assign remaining tasks by 8PM the following day if needed. The conversation ended with casual conversation about graduation plans, with Aidan mentioning he would attend despite a scheduling conflict with a friend's wedding.
